

NEWS RELEASE

Airolusion (a UK Company) have launched the **Vorsphere™**

The **Vorsphere™** is the ultimate futuristic development in explosion containment and mitigation. After many years of technological study, analysis, theory and test, the Airolusion team, have developed what could be construed as **the biggest leap forward in explosive containment devices**. The design is based on the principles of science, physics and nature. Airolusion have developed a range of re-usable containment devices that will suit a variety of situations and environments.

The **Vorsphere™** design has been based around a number of objectives:

- 1 Develop a containment device that could contain IED's (*improvised explosive device*), EOD's (*Explosive Ordnance Disposal*), Anti Personnel & Anti Tank mines and Mortars and, not suffer from Fragmentation.
- 2 Make certain that it would be re-usable.
- 3 Ensure it could be manufactured in varying sizes, with different capabilities, to suit *any* Military or Civilian environment.
- 4 Ensure it could be easily manufactured.

Once they had achieved the principle objectives they had a fundamental aim to ensure that the **Vorsphere™** was environmentally friendly.

- It will minimize damage to property, and infrastructure.
- It is safe for local communities and operational staff.
- It minimizes any damage to the immediate environment caused by the effects of a detonation and prevents any contamination of the soil and water systems.
- It will ensure it prevents any damage to the natural habitats of the local wildlife.
- It ensures that any remnants of historical or cultural significance are protected from damage or contamination.
- It will ensure that no trace of the explosive device remains and the surrounding environment does not suffer from destruction or toxic / hazardous waste.
- The land and the area where the device was laid is instantly re-usable and free from any contamination.

The **Vorsphere™** can be manufactured to contain a wide range of devices, or designed for a specific or particular situation or environment.

- It can be easily transported by any method or means and can be easily manoeuvred into any location.
- It requires minimal operational skill.
- It does not need to be secured to the ground.
- It will prevent Fragmentation.

The **Vorsphere™** will:

- Safely Contain and Remove Explosive Devices.
- It will also allow the Safe Detonation without threat to life, land or buildings.
- It will ensure the surrounding environment is protected from damage or contamination.

The **Vorsphere™** Portfolio of equipment covers the following areas:

- Land mine / anti tank clearance.
- Containment and transport of IED's.
- Transportation of high explosives.
- Road bollards.
- Bombproof litter bins.
- Planters.

PROCUREMENT

Airolusion will supply a range of standard containment units for general field operations within the military or civilian environment, or will manufacture bespoke specification units to order.
